#### **DETAILED ACTION**

# **Continued Prosecution Application**

The Request for Continued Examination (RCE) under 37 CFR 1.53(d) based on parent Application No. 09/821919 is acceptable and a RCE has been established. An action on the RCE follows.

## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-2, 6-8, 12 and 21-23 are rejected under 35 U.S.C. 102(b) as being anticipated by Saitou et al. (US 6451005 B).

Saitou et al. (US 6451005 B) discloses catheter body comprising an inner insulator and an outer insulator of similar synthetic resins and having a conductor wound and embedded therebetween, and that the inner and outer layer are fused together to form a unitary structure.

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-3, 6-9, 12-14, 16-18, 20-23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nita et al. (US 5951539) in view of Saitou et al. (US 6451005).

Application/Control Number: 09/821,919

Art Unit: 3742

Nita discloses a catheter body and method of making a catheter body comprising a inner insulator formed about a central mandrel, an outer insulating around the inner insulator and a conductor wound about the inner insulator, wherein the outer and inner insulators are fused by heat to each other. It is noted that the word "fuse" has been limited by applicant's disclosure and arguments to require melting of the two layer to form a unitary layer. Saitou et al. discloses a catherter body having a reinforcing conductor embedded between layers, wherein the two layers are melted, "fused" together to form a unitary layer surrounding the embedded conductor. It would have been obvious to fuse the inner and outer layers of Nita together as taught by Saitou in order to create a unitary body.

#### Response to Arguments

Applicant's arguments with respect to claims 1-23 have been considered but are moot in view of the new ground(s) of rejection. It is the examiner's opinion that applicant's arguments have obviated the previous rejections of record based on the examiner's assertion that curing and fusing are equivalents in the art, and further act to limit the scope of the claims to encompass lead bodies having inner and outer insulating means fused, i.e. melted into a unitary structure.

#### Allowable Subject Matter

Claims 4-5, 10-11, 15 and 19 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. It is noted that applicant has invoke 35 USC 112(6), in claims 10-11 by "means for spacing".

Application/Control Number: 09/821,919

Art Unit: 3742

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thor S. Campbell whose telephone number is 571-272-4776.

The examiner can normally be reached on Tue-Fri 5:30AM-4:00PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robin Evans can be reached on 571-272-4777. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
